

FOR IMMEDIATE RELEASE

JGR Optics improves performance of PT5 Polarity Tester

Ottawa, Ontario, October 9, 2017 – JGR Optics Inc. announced today the availability of a new version of its PT5 Polarity Tester which is now capable of testing 72 fiber single-mode and multimode ribbon cables in a single box and can be expanded up to 432 channels.

The PT5 comes with a simple software package which enables management of unlimited custom cable types. Within seconds, the software will provide simple Pass/Fail results for any configuration including type A, B, C, D and custom profiles.

“The improvements made to the PT5 Polarity Tester can significantly improve throughput in a production environment but, even more critical, provides compatibility to high fiber count cables which are now commonly deployed in data centers.” said Mark Berezny, Sr. Product Line Manager at JGR Optics.

About JGR Optics inc.

Since the introduction of the innovative, industry-leading, Backreflection Meter (BR5) and Multi-Output Backreflection Meter (MBR5), JGR has expanded their portfolio to include the widely used MS12001 Cable Assembly Test System, and industry leading Benchtop (SX4) and Rackmount (SX8) Optical Switches. Through recent development JGR now also offers the newly introduced Optical Attenuators (OA5), Polarization Dependent Loss Meter (PDL5), an ultra-wide wavelength range Tunable Laser Source (TLS5) and an complete Environmental Optical Test System (EOTS).

In addition to research, development, and production within the JGR facility in Ottawa, Canada, they operate an ISO 17025:2005 Accredited Laboratory for repair and NIST-traceable calibration services.
